- ✓ Add notes
- ✓ Values
- ✓ Signals
- ✓ Barcodes
- ✓ History

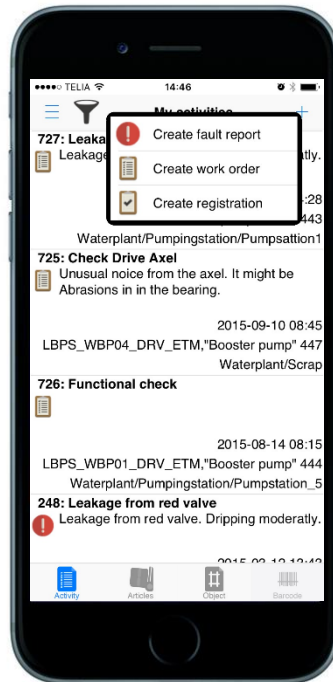

Create  
new tasks

# Create tasks wherever you are

*With your Smartphone or Tablet*

You can choose to create reports, work orders or register completed tasks directly.

Scan objects with QR codes or barcodes.

Take photos with your device and attach them to your report/work order.

In tasks you can take notes, fill in class code, maintenance code, status, priority and estimated time that the tasks might require.

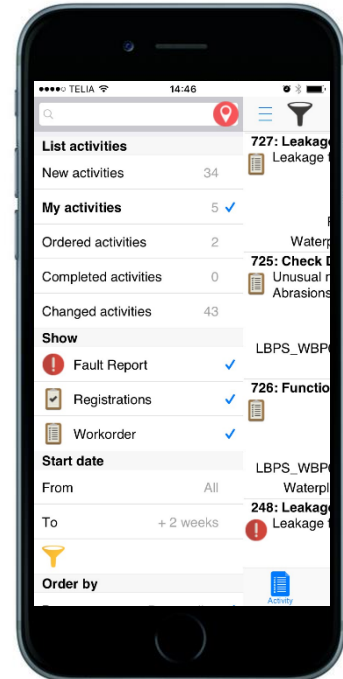

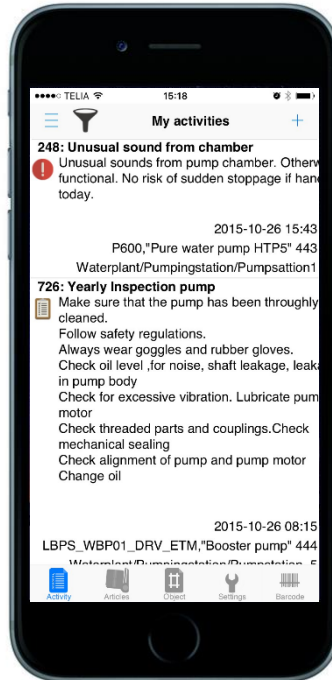

You can use mandatory fields so that everyone works in the same manner.

Handle your  
current tasks

Handle tasks directly consigned  
to you and your department

Assort the tasks you want to see. The filters will ensure that you'll only get the right information.

Choose a task to work with. It's possible to open tasks, insert information, saving and later continue to handle the same task.

Sign out materials directly from the storage whilst handling a task. (If they're connected in Idus maintenance system.)

Register a fault report or create a fault report from a work order.

Complete tasks

Finalize tasks on the spot when the job is done.

To get the job documented in Idus you can do an immediate registration which is the fastest option.

Register elapsed time directly in the app and link expenses to the related account.

The camera on your device can be used on all tasks.

## GPS coordinates

Tag objects with GPS  
coordinates to find them easily  
*This function is very beneficial when objects  
aren't located in a single area.*

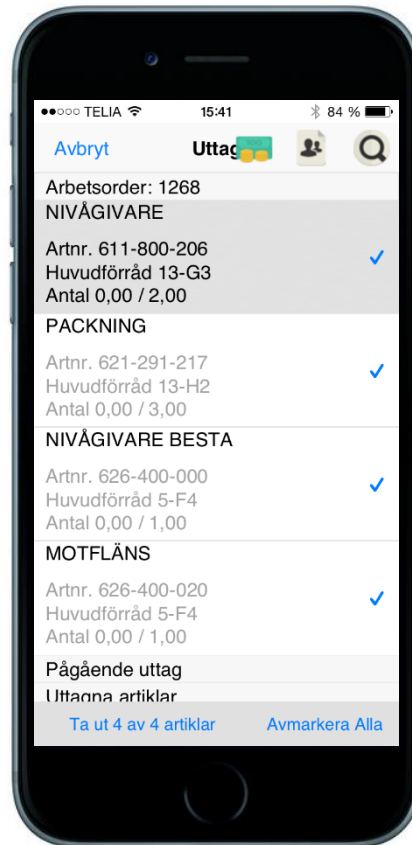

Through Google Maps you can tag your current position  
so that every object gets its own GPS coordinates.

GPS coordinates are visible on the object card in Idus  
maintenance system.

# Storage App

Under  
Development

## Storage App

- ✓ Deliveries
- ✓ Withdrawals
- ✓ Barcodes
- ✓ Storage management

## Work online & offline

With or without internet  
connection.

*Internal database to enable work  
offline and then sync the information  
when online.*

Wherever you are you can work with the app, either online or offline.

The app will download all tasks to your device. The information will be synched as soon as your device receives internet connection.

This grants you constant access so to your tasks so that you can finalize them on the spot.
