Plan your maintenance

Overview the demand for maintenance from a single place and waste less time on administration. From here you can easily filter, plan and schedule your work.

Distribute work orders

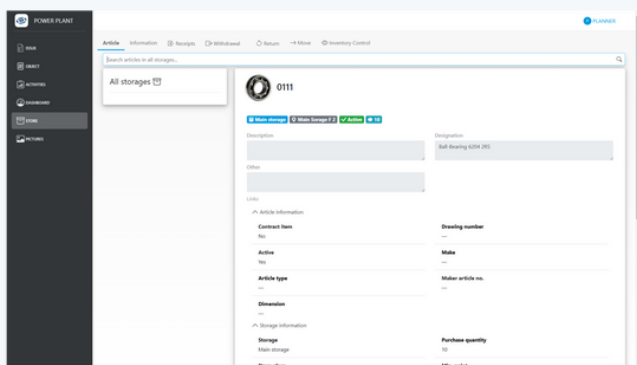

Reduce your work order-backlog in the weekly planner. From here you can drag and drop work orders and assign personnel by their available time.

Organize your plant

Find everything in your plant with just a few clicks.

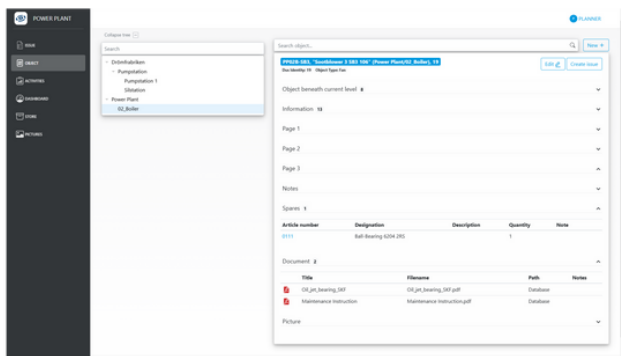

- Organize your entire plant from a central location.
- Keep track of costs and see it auto summed.
- Import your existing data from Excel etc.

Optimize your store

Organize, manage and optimize your maintenance store.

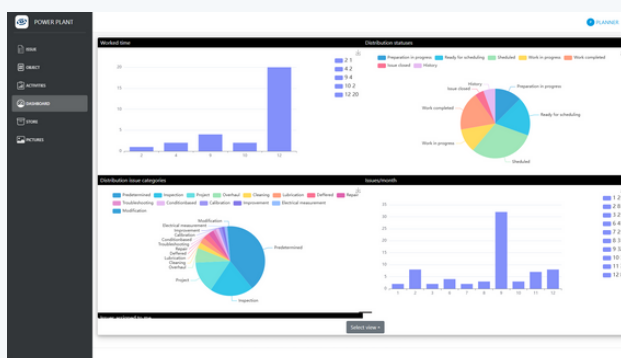

- Find the right balance of inventory levels and ABC classes.
- Send purchase orders directly to the suppliers.
- Integrate with your ERP and spend less time on admin.

Gather all documents

Gather every document in a single location directly in Idus and get rid of browsing.

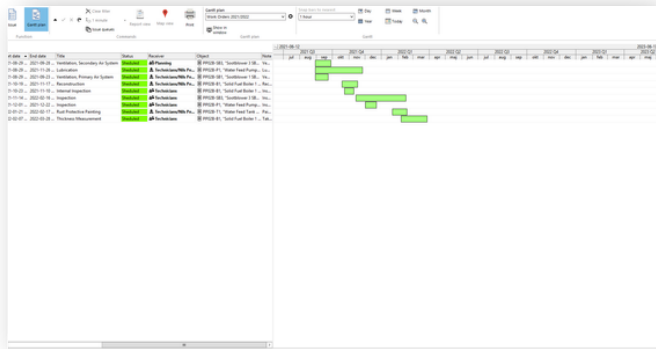

- Store all documents in the repository and on the objects.
- Easy version management and no broken links.
- Open the documents directly in the app or on the work order.

Make data-driven decisions

Make more data-driven decisions by running some of the many reports that are available in the system.

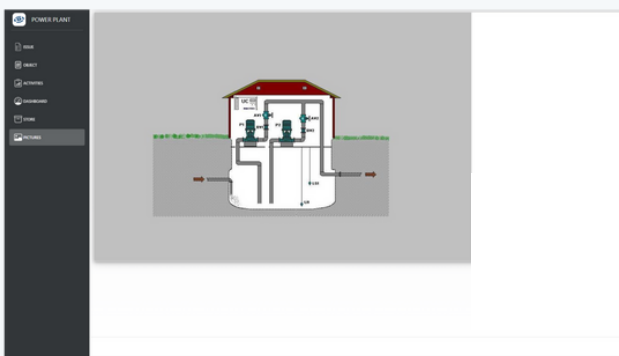

- Decide which reports you want to see in the dashboard.
- Have reports tailor-made after your requirements.
- Run reports on regulatory requirements and audits.

Manage projects

Manage your shutdowns and other projects by drag and dropping your work orders and activities onto the plan.

- Create rows for personnel, cranes, construction, etc.
- Drag, drop, and move activities in the project plan.
- Idus will sum the project's costs automatically.

Navigate through images

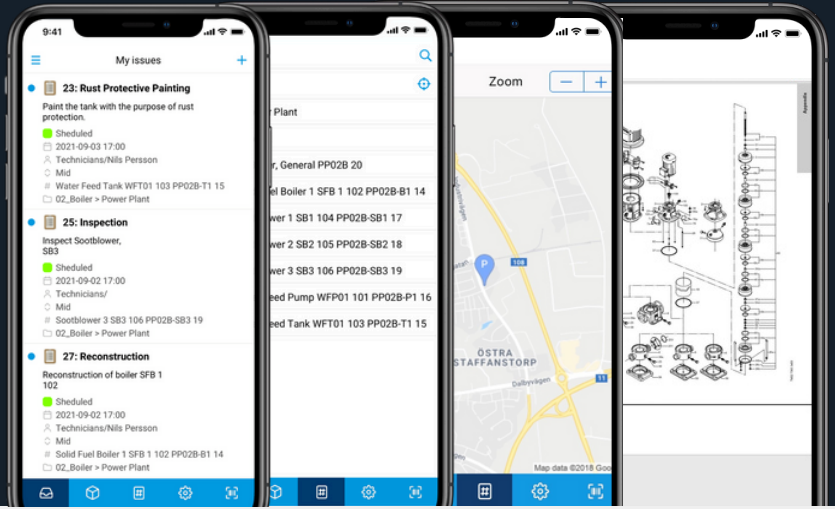

With the user-friendly image navigation, you can easily point and click your way through the plant.

- Use drawings, photos, or maps to navigate.
- Create your image navigation fast with buttons.
- Import images from your other systems like SCADA.

Idus Maintenance App

Maintenance work anywhere
without any limitations.

Create activities

Create activities directly in the field or on the go in your plant. Make sure that all activities are recorded for planning and scheduling.

Close work orders

Close work orders in the field with hours spent or other useful information like measures, failure codes, or consumed materials and knowledge for the future.

Overview equipment

Look at the technical data, related spare parts and what jobs were carried out earlier, and how the faults were corrected or open the machine documents. You can also use QR-codes.

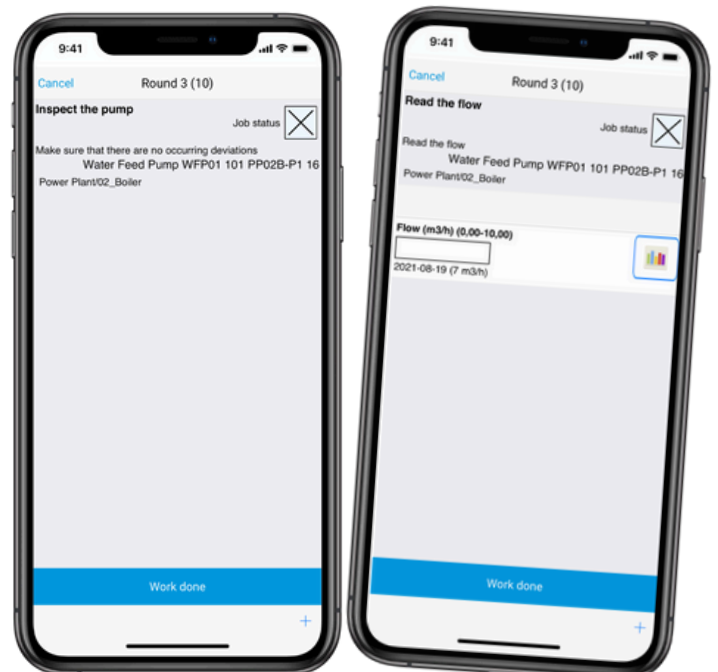

Online and offline

The app can be used without internet. The app will store your work orders, closed jobs and other information until you are connected to the mobile network or WIFI again.

Round List & Value readings

Stay on top of unplanned stoppages with rounds and value readings.

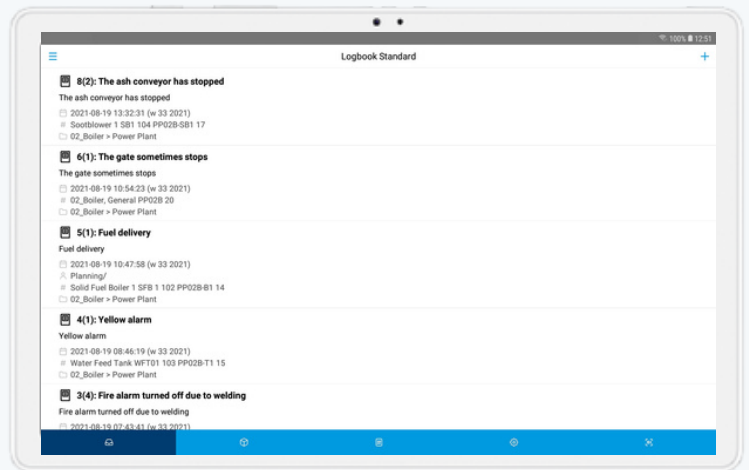

- ✓ Check off controls and round stations.
- ✓ Enter values on the round stations.
- ✓ Report faults and deviations from the list.

Loggbok in your app

Log events directly
on the spot

- ✓ Keep track of events in the production.
- ✓ Log events related to the operation.
- ✓ Create work orders from your events.

Idus App Storage

Correct balances

Reach balance security with Idus Storage Module and get notifications about order points.

Just scan the code

Scan you barcodes/QR-codes in order to withdraw material, submit or overview your material.

Withdraw on WOs

Add the correct material on your work orders and reach full control of your maintenance costs.

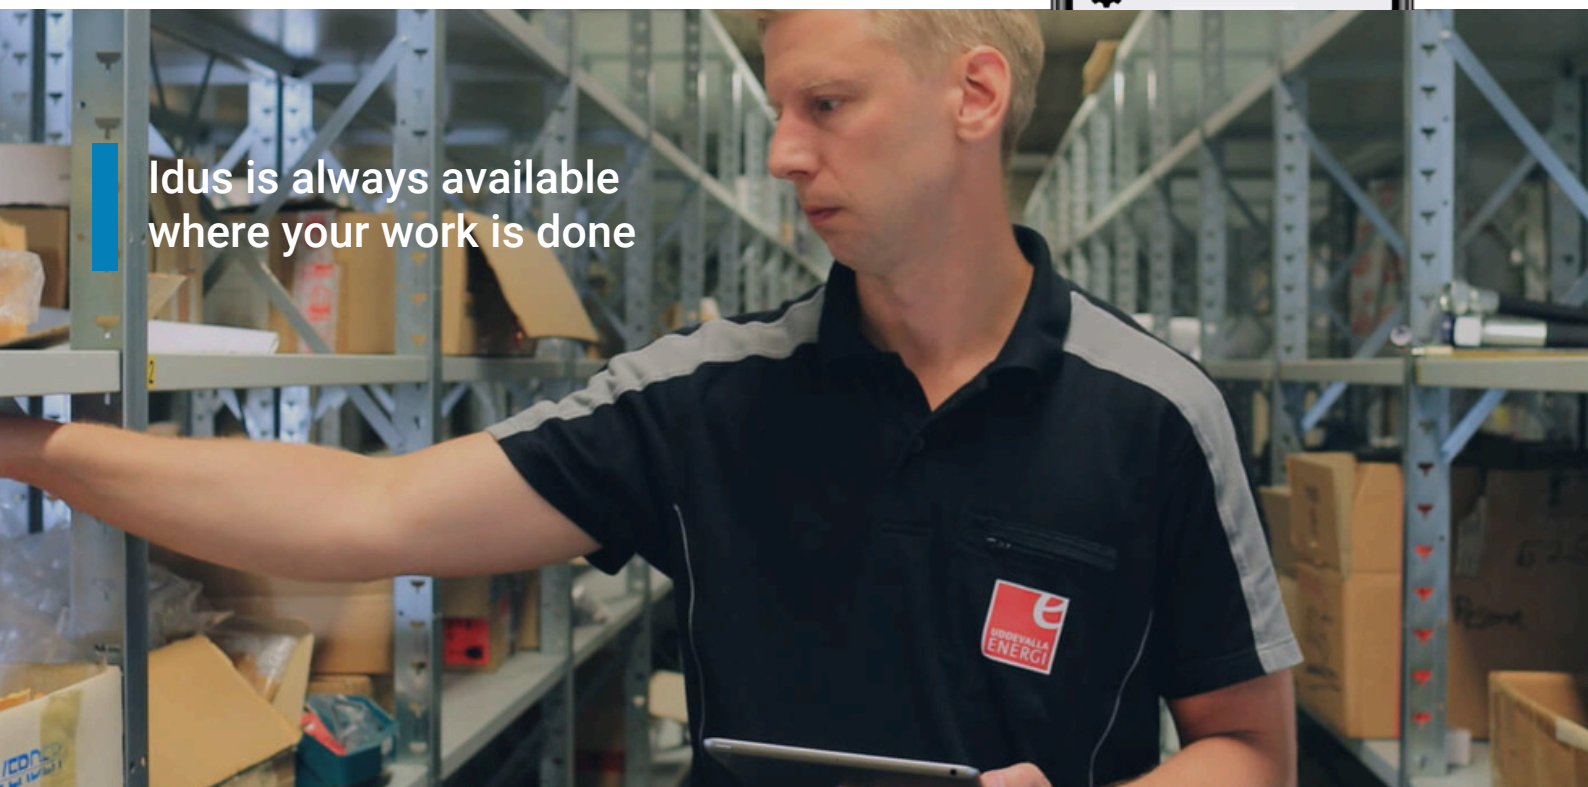

Easy to use

When everyone withdraws material from the store, the balance will always be right.

Idus is always available
where your work is done

The right maintenance at the right time

Plan, follow up and improve your maintenance together in the organization. Reduce waste of resources and reach measurable results.

Easy to get going, easy to expand

Cloud or server? You decide!

We can store your Idus system in the cloud or install it on your own server depending on your needs. You can change between the solutions whenever you want.

Integrate with what you wish

Idus' integration tool makes it easy to connect your maintenance system with other systems like ERP, SCADA, sensors, GIS, etc.

See your project take off!

To get your system directly up and running we will go through a start project of five days where we help you get going with the most important functions by training and configuration to suit your organization.

30 years with maintenance systems

At Idus we have developed and implemented maintenance systems for 30 years, this means that we have collected a lot of knowledge about what really works.

What do the users say?

“

Idus had the best app and lowest threshold for both users and IT. We used the import tool from Idus and it worked very well.

”

Fredrik Bottenmark
Kalmar Energi

“

It wouldn't work without Idus, we would be flooded with post-it-notes, there is too much to be distributed among the personnel, it's impossible to remember everything.

”

Göran Påander
VA SYD

“

From everything that is submitted, the planners can run useful reports and for example see which pumps are more prone to failure.

”

Per Bengtsson
Boliden Bergsöe

About us at Idus

All good things are three. Improving reliability, reducing waste, and applying technical skills – this is the Idus way and has been ever since the start in 1992.

Välfungerande organisationer bygger på idén om kontinuerlig utveckling för att minska svinn och öka effektiviteten. Idus grundare fostrades inom LEAN och hade drivkraften till ständig utveckling för att motverka resursslöseri.

Idus has the same main owners as Novotek (Nasdaq Stockholm) since 1998 and by this partnership we can offer complete solutions within industrial automation, cyber security and IoT/Industry 4.0.

Novotek is also the distributor of Idus' systems in the other Scandinavian countries, Benelux, Switzerland, and the UK & Ireland.
